PROFESSIONAL SUMMARY

7th-semester BS Information Engineering Technology student focused on AI/ML, mobile app development, and full-stack product engineering. Built object detection and cross-platform mobile projects using Python, YOLO, React Native, Flutter, Firebase, and API integrations. Seeking a Software Engineering or AI/ML internship where I can contribute through practical implementation, debugging, and disciplined delivery.

FEATURED PROJECTS

SAR Ship Detection: Ensemble Object Detection, Final Year Project

Python · YOLOv8 · YOLOv11 · OpenCV · Weighted Box Fusion

- Designed a three-model ensemble (YOLOv8s, YOLOv11s, YOLOv8m) combined with Weighted Box Fusion, trained and evaluated on the SSDD dataset.
- Reached 0.995 mAP@0.5 on SSDD under our evaluation setup; used Gupta et al. 2024's reported 0.92 mAP as an external reference point.
- Led model evaluation and ensemble strategy within a 3-person team, from data pipeline through final benchmarking.

Persist: AI-Powered Habit & Goal Tracking App

React Native (Expo) · Flutter · Firebase · OpenRouter LLM API

- Built a 20+ screen cross-platform app (React Native + Flutter) covering onboarding, daily task planning, focus timer, mood logging, and a private friend-pod accountability system, backed by Firebase auth and Firestore.
- Designed a 7-factor heuristic model to predict habit "skip risk" and surface early-warning signals to users in real time.
- Integrated an LLM API for AI-assisted goal/task planning, with schema validation and safe rejection of invalid or malformed plans.

NPR Web Scraper: Structured News Data Extraction

Python · BeautifulSoup

- Built a scraper to extract and structure web content for data collection and analysis.

Lost & Found Portal / Habit Tracker: Full-Stack Web

Django · React

- Built a Django-based lost-item posting and search portal.
- Built a companion React habit tracker with streak-based progress tracking.

EXPERIENCE

Data Annotator: Adaxiom (Remote)

2022 – 2024

- Labeled and QA-reviewed image and text datasets for ML training pipelines, maintaining consistent accuracy standards across large annotation batches.
- Handled ambiguous and edge-case labels, directly improving downstream model training data quality.

Frontend Web Development Intern: Adaxiom

Jun 2024 – Aug 2024

- Built and shipped responsive web pages using HTML, CSS, and JavaScript within an Agile team workflow.
- Debugged cross-browser UI issues in collaboration with senior developers under real delivery timelines.

Computer Science Tutor: Independent

Sep 2023 – Mar 2026

- Taught programming fundamentals and CS concepts to Matric and ICS students.

CORE SKILLS

Languages: Python, JavaScript, HTML5, CSS3

AI / ML: PyTorch, scikit-learn, OpenCV, YOLOv8/v11, Object Detection, Model Evaluation, NumPy, Pandas, Matplotlib

Mobile: React Native, Flutter, Expo, Firebase (Auth, Firestore, Storage), Firestore Data Modeling

Backend / Web: Django, REST APIs, API Integration, BeautifulSoup

Tools: Git, GitHub, VS Code, Jupyter Notebook

EDUCATION

BS Information Engineering Technology | Superior University, Lahore

2023 – 2027 (Expected)
